

ENZOGENOL®

The New Zealand Advantage

Pinus radiata are plantation grown in New Zealand's pristine environment where this species finds ideal growing conditions. New Zealand's vast pine forests are managed on an environmentally sustainable basis. Through long standing close relationships with our suppliers we ensure high quality unlimited raw material supply.

Pristine Environment

Ideal Growing Conditions

Sustainable Quality

The pines grow for 25-30 years before felling and the bark is then harvested from the lower third of the mature tree trunk.

The uniform age of the trees and choice of bark ensures consistency in the starting material and thereby minimizes any variation in the compounds extracted from the bark.

The Technology Advantage

Internationally Patented Pure Water Extraction

Enzogenol® is produced using ENZO Nutraceuticals' proprietary, internationally patented pure water extraction technology. The process was developed by a multidisciplinary team of researchers and engineers, and combines several important advantages:

- **Pure Water Process** - The extraction uses only pure, deionised water, no chemicals of any sort are used in the process eliminating any possibility of unwanted residues.
- **Full polyphenol compound spectrum** - The process produces a natural extract from the pine bark that contains the full spectrum of health beneficial polyphenolic compounds.
- **Protecting maximal activity** - The extraction conditions are optimised to protect the natural state of the polyphenols preserving the maximal antioxidant activity.
- **Ecologically sound technology** - The entire process is environmentally friendly and does not produce any problematic wastes.
